DYNAMIC
LIFECYCLE INNOVATIONS

API
Integration

Our API integration streamlines data exchange between Dynamic's ERP and the client's systems, reducing manual effort and providing real-time visibility.

BENEFITS

Dynamic's API integration connects directly with your internal systems to create a smoother, more scalable workflow. By syncing data automatically across platforms, it enables faster processing, tighter system alignment, and a stronger foundation for enterprise-wide insight.

PROBLEMS SOLVED

Dynamic's API integration eliminates the inefficiencies of manual data entry, which reduces errors, saves time, and frees up internal resources. It automates the flow of key information, such as asset status, order updates, invoices, and sustainability metrics.

Service Process

Our API integrates with platforms like ServiceNow and client asset repository systems. Data is exchanged securely and reliably using modern protocols and encryption standards.

Service Options

- Includes ServiceNow, MuleSoft, and custom API integrations with ERP/ITAM platforms
- Post-launch support and monitoring are included

Simplify your ITAD execution and reporting.

Integrate device retirement data directly into your asset repository with our API integration.
