

Carbon Calculator

Empower your team to demonstrate their environmental impact through detailed, data-driven reporting for your company.

SCOPE 3 EMISSIONS

Scope 3 emissions often represent a majority of an organization's total greenhouse gas emissions, according to the U.S. Environmental Protection Agency. However, these emissions, also known as "value chain emissions," can be challenging to measure and modify because they involve upstream and downstream sources outside your direct control.

Using the third-party verified carbon calculator from Dynamic Lifecycle Innovations, you can gain a more precise understanding of how these programs help you avoid scope 3 emissions.

CUSTOM & MEASURABLE RESULTS

As the leader in ITAD and e-waste recycling, Dynamic Lifecycle Innovations has committed to offering the easiest-to-use and most accurate tool for estimating potential scope 3 emissions avoidance from the processing of your materials.

Six Dynamic Carbon Calculator Advantages

- **Broader scope** calculating for 37 categories of e-waste
- **More realistic data inputs** by automatically tracking your actual material
- **Proven methodology** using UN CDM e-waste recycling methodology
- **Third-party validation** from Morningstar Sustainalytics
- **More usable results** with clear, real-time reporting

Verify avoided emissions.

Leverage the Dynamic carbon calculator to get accurate ESG reporting. .
